

## Features and Benefits of Embelton Bamboo Flooring

### **Environmentally friendly**

Bamboo re-grows much faster than timber, with minimal environmental impact when harvested, making it the ultimate sustainable floor.

### **Tough**

Bamboo is extremely durable (Janka rating of 15 – harder than any Australian timber), making it equally suitable for families with young children and pets or large commercial installations with heavy foot traffic.

### **Cost effective**

Because bamboo is harder than timber, a well maintained bamboo floor will last longer, yielding useful savings over the full life of the floor.

### **High quality manufacturing process**

Embelton Bamboo floors are manufactured using the latest strand woven techniques, further enhancing its durability over other engineered floors.

### **Excellent stability**

Manufactured to a density greater than most Australian hardwoods, Embelton Bamboo floors are more stable and less prone to dents and scratches.

### **Easy to install**

Individual floor boards simply click together with the easy Unilin click system, making installation quick and easy.

### **Pre-finished**

Our floors are coated with 10 layers of the finest UV acrylic, giving a high quality finish, and allowing you to walk on it instantly.

### **25-Year guarantee**

Embelton Bamboo floors come with a 25-year guarantee, indicating great product durability and providing reassurance to the customer.

### **Technical specifications:**
